If you have been fully vaccinated and do not have symptoms, you do not need to quarantine, but should monitor for symptoms and get tested if you develop them.

If you had close contact with a person who has COVID-19 (whether or not they have symptoms):

- Stay home until 10 days after your last contact.
- Check your temperature twice a day and watch for symptoms of COVID-19.
- If possible, stay away from people who are at higher-risk for getting very sick from COVID-19.

Whether or not you have been vaccinated does not impact isolation instructions.

If you are sick and think or know you have COVID-19:

- Stay home until after:
  - At least 10 days since symptoms first appeared
  - At least 24 hours with no fever without fever-reducing medication
  - Symptoms have improved

If you tested positive for COVID-19 but do not have symptoms:

- Stay home until after:
  - 10 days have passed since your positive test (from the day you were tested)

If you live with others, stay in a specific “sick room” or area and away from other people or animals, including pets. Use a separate bathroom, if available.

Once you believe you have met the criteria for coming out of isolation, you must provide documentation from a health official confirming that you meet the criteria and can return to the workplace or class and campus activities.
